Name That Element Answer Key

I have an associative array in the form key => value where key is a numerical value, however it is not a sequential numerical value. The key is actually an ID number and the value is a count. This is fine for most instances, however I want a function that gets the human-readable name of the array and uses that for the key, without changing the value.

In PHP, how do you change the key of an array element ...

Traverse the tree as you would to find the element. While you do that record the value that is closest to your key. Now when you didn't find a node for the key itself return the recorded value.

algorithm - How to find the closest element to a given key ...
