This free periodic table is color-coded to indicate the electronegativity of an atom of an element. Electronegativity is a trend naturally exhibited in the periodic table, but as you can see, it's not a hard-and-fast trend. Use the table to write the names of compounds and to predict chemical reactions.

### chemistry periodic table Flashcards and Study Sets | Quizlet

Mini-lesson: I start the lesson by linking electron configurations to an elements place on the periodic table. I remind students that Group 1A metals have 1 valence electron, and that Group 2A metals have 2. I explain that the implications for this structure are that the atoms for these elements are eager to get rid of their outer shell electrons.
