In biology, taxonomy (from Ancient Greek τάξις (), meaning 'arrangement', and -νομία (), meaning 'method') is the science of naming, defining (circumscribing) and classifying groups of biological organisms on the basis of shared characteristics. Organisms are grouped together into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be ...

In the 1920s and 1930s the so-called modern synthesis connected natural selection and population genetics, based on Mendelian inheritance, into a unified theory that applied generally to any branch of biology. The modern synthesis explained patterns observed across species in populations, through fossil transitions in palaeontology, and complex cellular mechanisms in developmental biology.

In this review, I synthesize the current state of scholarship on human-wildlife conflict and coexistence. I define key concepts, describe the importance of conflict, place it in evolutionary and historical context, examine broad categories of conflict, characterize factors influencing conflict and responses to conflict, and identify future research needs.
