Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated.

As stated earlier, the motion of a satellite (or of a planet) in its elliptical orbit is given by 3 "orbital elements": (1) The semi-major axis  $a$ , half the greatest width of the orbital ellipse, which gives the size of the orbit. (2) The eccentricity  $e$ , a number from 0 to 1, giving the shape of the orbit. For a circle  $e = 0$ , larger values give progressively more flattened circles, up to  $e = 1$  ...
