Blood gases are a group of tests that are performed together to measure the pH and the amount of oxygen (O₂) and carbon dioxide (CO₂) present in a sample of blood, usually from an artery, in order to evaluate lung function and help detect an acid-base imbalance that could indicate a respiratory, metabolic or kidney disorder.. A person's body carefully regulates blood pH, maintaining it ...

Angiography or arteriography is a medical imaging technique used to visualize the inside, or lumen, of blood vessels and organs of the body, with particular interest in the arteries, veins, and the heart chambers. This is traditionally done by injecting a radio-opaque contrast agent into the blood vessel and imaging using X-ray based techniques such as fluoroscopy.

Visual Stimulus • Our visual system is sensitive to a portion of the electromagnetic spectrum (in wavelength, the typical way of talking about light waves, from a bit less than 400 nm to a bit more than 700 nm). Note that although human beings cannot see ultraviolet rays or infrared rays, other creatures are sensitive to those portions of the electromagnetic spectrum.
