A bushing or rubber bushing is a type of vibration isolator. It provides an interface between two parts, damping the energy transmitted through the bushing. A common application is in vehicle suspension systems, where a bushing made of rubber (or, more often, synthetic rubber or polyurethane) separates the faces of two metal objects while allowing a certain amount of movement.

The Air Saver Unit is an easy solution to reduce compressed air consumption and improve the efficiency of air blow applications. The Air Saver works by converting continuous air blow to pulsed air blow without the need for any other external control.

Real-time vibration monitoring visualizes changes to equipment's low-frequency vibration levels and identifies changes when they occur. The vibration monitoring system provides alerts when vibrations go outside of the normal range and streams condition-based data to central operations through a web-hosted platform via WiFi communication.

2) Helical Gear-Helical gears have their teeth inclined to the axis of the shafts in the form of a helix, hence the name helical gears. These gears are usually thought of as high speed gears. Helical gears can take higher loads than similarly sized spur gears. The motion of helical gears is smoother and quieter than the motion of spur gears.
