When applying the laws of mathematics and logics to physical phenomena, do not cancel any solutions, even if they seem to be inapplicable to reality. Contrary, we can study the "inadequate" solutions, and look what physical phenomena may be predicted

Abstract. When considering the laws of theoretical physics, one of the physicists says that these laws – the actual expressions of the laws of mathematics and logics being applied to physical phenomena – should be limited according to the physical meaning we attribute to the phenomena.
