An electric spark is an abrupt electrical discharge that occurs when a sufficiently high electric field creates an ionized, electrically conductive channel through a normally-insulating medium, often air or other gases or gas mixtures. Michael Faraday described this phenomenon as "the beautiful flash of light attending the discharge of common electricity".

The real answer is to do as many are doing and set a limit of 100 ppm (parts per million) or 100 mg/L, or whatever else your expert recommends, for cobalt in machine coolant and then safely dispose of it at that level. That is really low by legal limits but it is safe and that should be important to you and I because it is our lungs we are talking about.

A metal (from Greek μέταλλον métallon, "mine, quarry, metal") is a material that, when freshly prepared, polished, or fractured, shows a lustrous appearance, and conducts electricity and heat relatively well. Metals are typically malleable (they can be hammered into thin sheets) or ductile (can be drawn into wires). A metal may be a chemical element such as iron, or an alloy such as ...
