An electric power system is a network of electrical components deployed to supply, transfer, and use electric power. An example of an electric power system is the grid that provides power to an extended area. An electrical grid power system can be broadly divided into the generators that supply the power, the transmission system that carries the power from the generating centres to the load ...

A microbial fuel cell (MFC), or biological fuel cell, is a bio-electrochemical system that drives an electric current by using bacteria and mimicking bacterial interactions found in nature. MFCs can be grouped into two general categories: mediated and unmediated. The first MFCs, demonstrated in the early 20th century, used a mediator: a chemical that transfers electrons from the bacteria in the ...

A brief overview on underwater manipulators can be found in the underwater robots review paper by Yuh and West (2001). Antonelli (2014) provided a good theoretical background for underwater manipulators from the modeling and control point of view. However, a complete article encapsulating relevant practical and theoretical knowledge, state of the art technology as well as up to date research ...
