The Mole and Molecular Weight Basic Concept Formula Weight / Molecular Weight (MW) The formula weight of a compound is the sum of all the atomic weights of the elements present in the formula of the compound.

The Mole and Molecular Weight

The molecular mass, often called the molecular weight (MW), is the weight of all atoms in a given molecular formula. Molecular weight is measured in Atomic Mass Units, usually expressed as u or amu. In order to calculate the molecular weight of a formula, you'll need to add up the atomic masses of each element present.

Three caveats and a caution: The caution is that we used the values for a 1mg/ml protein solution above, which is a 0.1% protein solution. This is used by many authors, textbooks, lab manuals, but some others use a 1% protein solution, or 10mg/ml. You might have to look carefully to see whether a particular, paper, protocol or whatever uses absorbance values for 1% or 0.1% solutions- if the ...
