It's all about safety: The horn warns drivers and pedestrians that a train is approaching. And it's the law: The Federal Railroad Administration's Train Horn Rule requires that trains sound the horn at public highway-rail grade crossings. FRA regulations generally require locomotive engineers to sound the horn at least 15 seconds before the locomotive enters the crossing.

Fig. 1a shows a comparison of both SAF curves derived from the V15 and M16 plate models, generated by direct computation of the subducted area through time. The V15 SAF curve was calculated and presented by V  rard et al. (2015), whereas the M16 SAF curve was computed in this study (extracted from the M16 plate model) by methods described in the Supplementary information.
