Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

Evolution - Wikipedia

Pseudogenes. Pseudogenes are DNA sequences that resemble functional genes but are generally thought to have no purpose. In fact many scientists think that pseudogenes are nothing more than discarded genetic fossils of a bygone era when they did have some sort of important function.
