Newton's third law relates forces between two objects. According to Newton's third law of motion,when one object exerts a force on a second object, the second object exerts a force of the same size but in the opposite direction on the first object. An example of forces described in Newton's third law of motion is a gymnast pushing against the floor during a flip.

The previous chapter discussed Newton's first law of motion which states that the motion of an object changes only if an unbalanced force acts on the object. Newton's second law of motion describes how the forces exerted on an object, like the volleyball in Figure 1,its mass, and its acceleration are related.
