In conclusion, for the same model I'm using: You can safely supply 3.3V (3.0V - 3.6V) to the OV7670 VDD. (I used this configuration) You can safely use a maximum of 3.0V for the I/O pins. However the module I/O pins will work at 2.8V.; A 5V supply for the OV7670 VDD might work (try at your own risk), it depends on the maximum input voltage of the LDO regulators your module has.
