DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 angstroms (Å) (3.4 nanometres).

DNA - Wikipedia

Papillary microcarcinomas (also historically referred to as papillary microtumor, occult, latent, or small papillary carcinoma) are not technically a specific variant but refer to papillary carcinomas that are found incidentally measuring 1 cm or less.⁴ In spite of their rather common identification in thyroid gland resections^{10,11} and apparent ...

C-technologies aim to investigate the frequency with which regions of DNA interact with each other in the nucleus. The technologies rely on the principle that loci that are spatially close to one another will be more frequently cross-linked together than regions located further away in 3D space [114, 115]. C-technologies are based on the detection of hybrid DNA fragments that are generated by ...
