In biology, taxonomy (from Ancient Greek τάξις (), meaning 'arrangement', and -νομία (), meaning 'method') is the science of naming, defining (circumscribing) and classifying groups of biological organisms on the basis of shared characteristics. Organisms are grouped together into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be ...

Taxonomy (biology) - Wikipedia

A must-read for anyone who wants to participate in talk.origins. This article lays out the land for evolutionists and creationists alike, presenting the concepts of and the evidence for biological evolution.

Introduction to Evolutionary Biology - TalkOrigins Archive

In the 1920s and 1930s the so-called modern synthesis connected natural selection and population genetics, based on Mendelian inheritance, into a unified theory that applied generally to any branch of biology. The modern synthesis explained patterns observed across species in populations, through fossil transitions in palaeontology, and complex cellular mechanisms in developmental biology.

Evolution: Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations. It is one of the keystones of modern biological theory.

SparkNotes online free test prep. Until this chapter, we have focused almost entirely on translational motion, the motion of bodies moving through space. But there is a second kind of motion, called rotational motion, which deals with the rotation of a body about its center of mass. The movement of any object can be described through the combination of translational motion of the object's ...

Adaptation is the evolutionary process where an organism becomes better suited to its habitat. This process takes place over many generations. It is one of the basic phenomena of biology. When people speak about adaptation, they often mean a 'feature' (a trait) which helps an animal or plant survive. An example is the adaptation of horses' teeth to grinding grass.
