Do Now: Students walk into class with this problem on the projection screen: In a liter of human blood there are 9 grams of salt. What is the NaCl molarity of human blood? Fun fact: adult bodies contain about 5 liters of blood. I reason this is a good warm-up activity because it recaptures the work with molarity that students have been working on over the past two classes, and molarity is a key ...

Usually, you aren't given the hydrogen ion concentration in a problem but have to find it from a chemical reaction or acid concentration. Whether this is easy or not depends on whether you're dealing with a strong acid or a weak acid. Most problems asking for pH are for strong acids because they completely dissociate into their ions in water.

1. A hydrogen ion is a hydrogen atom that has lost an electron. Given that the most common naturally occurring isotope of hydrogen contains just 1 proton and NO neutrons in its nucleus, and 1 "orbiting" electron, then, when this isotope loses an electron it is just a proton! Because naturally occurring hydrogen is also made up of very tiny amount of other isotopes of hydrogen, the term hydron ...
