What is the formula to calculate momentum - answers.com

Momentum as a Vector Quantity. Momentum is a vector quantity. As discussed in an earlier unit, a vector quantity is a quantity that is fully described by both magnitude and direction. To fully describe the momentum of a 5-kg bowling ball moving westward at 2 m/s, you must include information about both the magnitude and the direction of the bowling ball.

Shared your post on my FB Timeline – “Most stress and psychological problems can be fixed at no cost, with minimal to no “professional” intervention, prescriptions, etc.,.

Straightforward Answers to 37 of Life’s Most Common Problems

Physics problems with solutions and tutorials with full explanations are included. More emphasis on the topics of physics included in the SAT physics subject with hundreds of problems with detailed solutions.

Physics Problems with Solutions and Tutorials

Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated.

Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.. There are still some deficiencies in the Standard ...

List of unsolved problems in physics - Wikipedia

What would you expect to feel? You are in the same orbit around the sun as the earth, so there is no relative motion. The spin of the earth causes a centripetal force of 0.1 m/sec at the equator but gravity is 100 times stronger, so you are held to the ground.

If Earth revolves at 67000 mph and ... - answers.yahoo.com
