Amount - Introduction. The amount of a substance is a measure of the number of particles of a substance, be they individual atoms, as with the noble gases, diatomic molecules, such as with oxygen and the halogens, or more complex molecules.. Since atoms are so small and weigh so little even 1 g of a compound will contain an uncountable number of particles.

The molecular weight (or molar mass) of a substance is the mass of one mole of the substance, and can be calculated by summarizing the molar masses of all the atoms in the molecule.. Components in Dry Air. Air is a mixture of several gases, where the two most dominant components in dry air are 21 vol% oxygen and 78 vol% nitrogen.Oxygen has a molar mass of 15.9994 g/mol and nitrogen has a molar ...

Mass percent tells you the percentage of each element that makes up a chemical compound. Finding the mass percent requires the molar mass of the elements in the compound in grams/mole or the number of grams used to make a solution. It is simply calculated using a basic formula dividing the mass of the element (or solute) by the mass of the compound (or solution).
