1.4 Conditions of Equilibrium. A structure is a unit consisting of interconnected members supported in such a way that it is capable of carrying loads in static equilibrium. Structures are of four general types: frames, trusses, machines, and thin-walled (plate and shell) structures. Frames and machines are structures containing multiforce members. The former support loads and are usually ...

Coefficient of discharge is stated as the ratio between the actual flow discharge and theoretical flow discharge. It is also referred to as the ratio of mass flow rate at nozzle's discharge edge to the standard nozzle which enlarges an exact working fluid maintained at the similar initial conditions and pressures.

In this study, FEA is used to analyze the mechanics between the vacuum chuck and wafer during the back-thinning process. Compressive stress is usually formed in the surface damage layer of a wafer after the thinning process , , , . In the FEA process, thermal stress is assumed to simulate both grinding-induced stress (also called machining stress in this paper) and residual stress since these ...
