Because each person has two copies of the MTHFR gene, people can inherit one copy of a MTHFR gene variant or two copies of it (one from each parent). People who inherit two copies of C677T have a higher risk for having a child with a neural tube defect. Having two C677T variants and elevated homocysteine levels may cause a slightly higher risk for blood clots.

In statistics, sampling bias is a bias in which a sample is collected in such a way that some members of the intended population are less likely to be included than others. It results in a biased sample, a non-random sample of a population (or non-human factors) in which all individuals, or instances, were not equally likely to have been selected. If this is not accounted for, results can be ...

Sampling bias - Wikipedia

Genetic testing is available for APC, the gene known to cause Gardner syndrome. Carrier testing for at-risk relatives and prenatal testing are possible if the disease-causing mutation in the family is known. Because colon screening for those at risk for Gardner syndrome begins as early as age ten years, genetic testing is generally offered to children by this age.
