In this part of the website we apply the ANOVA methodology of One-way ANOVA and Two-way ANOVA to the extension of the paired samples problem studied in Paired Sample t Test. In this analysis, known as ANOVA with Repeated Measures, the rows correspond to subjects or participants in the experiment and the columns represent various treatments (often based on time) for each subject.

Height and weight of the Morgan State University men's basketball players. If you keep both variables as measurement variables and analyze using linear regression, you get a P value of 0.0007; the relationship is highly significant. Tall basketball players really are heavier, as is obvious from the graph.

I saw this cartoon from Randall Munroe, and it reminded me of something I wrote awhile ago.. The quick story is that I don't think the alternative histories within alternative histories are completely arbitrary. It seems to me that there's a common theme in the best alternative history stories, a recognition that our world is the true one and that the people in the stories are living in a ...

Use regression analysis to describe the relationships between a set of independent variables and the dependent variable. Regression analysis produces a regression equation where the coefficients represent the relationship between each independent variable and the dependent variable. You can also use the equation to make predictions. As a statistician, I should probably tell you that I love all ...

The Student's t-test is a statistical test that compares the mean and standard deviation of two samples to see if there is a significant difference between them. In an experiment, a t-test might be used to calculate whether or not differences seen between the control and each experimental group are a factor of the manipulated variable or simply the result of chance.
