Autism is a developmental disorder characterized by difficulties with social interaction and communication, and by restricted and repetitive behavior. Parents usually notice signs during the first three years of their child's life. These signs often develop gradually, though some children with autism reach their developmental milestones at a normal pace before worsening.

Autism therapies are interventions that attempt to lessen the deficits and problem behaviours associated with autism spectrum disorder (ASD) in order to increase the quality of life and functional independence of individuals with autism. Treatment is typically catered to the person's needs. Treatments fall into two major categories: educational interventions and medical management.
