An analysis of the history of technology shows that technological change is exponential, contrary to the common-sense intuitive linear view. So we won't experience 100 years of progress in the 21st century -- it will be more like 20,000 years of progress (at today's rate). The returns, such as chip speed and cost-effectiveness, also increase exponentially.

Referring to Figure 4, Figure 6, the load time series of Kuwaiti network for the given period can be divided into six regions, each year into two regions. The first region of each year is around 285 days (about 9.5 months) horizon. All regions can be fitted to third order polynomial as shown for instance in Figure 7, Figure 8 of year 2006. The first regions (first group) have a specific ...

In electrospinning, polymer nanofibers are formed by the creation and elongation of an electrified fluid jet. The path of the jet is from a fluid surface that is often, but not necessarily constrained by an orifice, through a straight segment of a tapering cone, then through a series of successively smaller electrically driven bending coils, with each bending coil having turns of increasing ...

In statistics and control theory, Kalman filtering, also known as linear quadratic estimation (LQE), is an algorithm that uses a series of measurements observed over time, containing statistical noise and other inaccuracies, and produces estimates of unknown variables that tend to be more accurate than those based on a single measurement alone, by estimating a joint probability distribution ...

We can see from this graph that when the neuron's output is close to \$1\$, the curve gets very flat,

and so  $\sigma'(z)$  gets very small. Equations (55) and (56) then tell us that  $\partial C / \partial w$  and  $\partial C / \partial b$  get very small. This is the origin of the learning slowdown.

An induction motor or asynchronous motor is an AC electric motor in which the electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor can therefore be made without electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type.
