Run advanced analytics alongside high-speed transactions on real-time data for accurate, up-to-date responses in a fraction of a second. The SAP HANA platform uses an in-memory database that eliminates predefined aggregates, materialized views, and data duplication between operational and decision support systems.

### **SAP HANA and Databases | Technology**

A database is an organized collection of data, generally stored and accessed electronically from a computer system. Where databases are more complex they are often developed using formal design and modeling techniques.. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.
