Wind energy is clean energy but not without its usual baggage. Their noise disturbs those who reside in the close proximity with a wind farm. Many a time wind turbines are forced to operate under partial load so that residents and wind farms can exist in peaceful co-existence. But operating under partial load means lower energy production.

A resonator is a device or system that exhibits resonance or resonant behavior. That is, it naturally oscillates with greater amplitude at some frequencies, called resonant frequencies, than at other frequencies. The oscillations in a resonator can be either electromagnetic or mechanical (including acoustic). Resonators are used to either generate waves of specific frequencies or to select ...

Effect of Matrix. Figures 3.26, 3.29 and 3.30 indicate that matrix type and related mechanical properties, especially tensile strength and hardness, exert considerable influence on fatigue strength. However, the decrease in endurance ratio with increasing tensile strength in Figures 3.26 indicates that increasing the tensile strength of Ductile Iron does not provide a proportionate increase in ...

In electronics, impedance matching is the practice of designing the input impedance of an electrical load or the output impedance of its corresponding signal source to maximize the power transfer or minimize signal reflection from the load.. In the case of a complex source impedance  $Z_S$  and load impedance  $Z_L$ , maximum power transfer is obtained when  $Z_L = Z_S^*$  where the asterisk indicates the ...
