Credits: 1. Prerequisite: Middle school biology and chemistry. Recommended: 9th or 10th Test Prep: CLEP Biology This course covers the basic material for this exam, but this is considered a very hard test, and I would suspect more will need to be studied to learn everything required for this huge exam. It's worth the same as two college courses which is why it covers so much.

A transposable element (TE, transposon, or jumping gene) is a DNA sequence that can change its position within a genome, sometimes creating or reversing mutations and altering the cell's genetic identity and genome size. Transposition often results in duplication of the same genetic material. Barbara McClintock's discovery of them earned her a Nobel Prize in 1983.

A mold or mould (UK / NZ / AU / ZA / IN / CA / IE) is a fungus that grows in the form of multicellular filaments called hyphae. In contrast, fungi that can adopt a single-celled growth habit are called yeasts.. Molds are a large and taxonomically diverse number of fungal species in which the growth of hyphae results in discoloration and a fuzzy appearance, especially on food.

In April 2014, scientists in South Korea and the United States announced that they had cloned a human embryo, which could have developed into a foetus if it had been implanted into a surrogate mother.. Cloning is the process of producing genetically identical individuals. This happens naturally in all asexual reproduction and in sexual reproduction when identical siblings are born.

Cytoplasm and nuclei can move through the septal pores of ascomycetes, as you can see in this transmission electron micrograph of a short segment of *Neurospora crassa* hypha - a nucleus is shown in the act of squeezing through the pore. However, Dr. Jim Aist, who has spent many hours watching nuclei in living hyphae, assures me that this does not happen very often.
