### **Teaching the Metric System**

Similar to scientific notation, unit prefixes make very large and very small number easier to manipulate and to understand.. Converting numbers from one metric prefix to another is a common task in many areas of science. For example, a lab may stock a 10 gram per liter (g/l) solution of glucose, while a particular procedure may require a 100 µg/l of glucose solution.

The Metric System. The metric system was created by the French in the late 1700's in response to the English system which, quite frankly, is fairly confusing in that it uses numerous different units

and has no uniformity among conversions.

The use of metric prefixes dates back to the inception of the French metric system, in 1793. It was originally decided that the submultiples of all basic units would be prefixed with a Latin root, corresponding to the decimal divisor (deci for 10, centi for 100, milli for 1000), whereas the decimal multiples would be prefixed with a Greek root, corresponding to the decimal multiplier (deca for ...
