Mdm Solutions Comparison

In business, master data management (MDM) is a method used to define and manage the critical data of an organization to provide, with data integration, a single point of reference. The data that is mastered may include reference data- the set of permissible values, and the analytical data that supports decision making.. In computing, a master data management tool can be used to support master ...

Master data management - Wikipedia

So many of the problems that organisations have with their IT applications are due to the struggle with data, in the absence of overall organization-wide control and supervision of data and its progress through the various parts of the organization.
