where $w_{i,j}$ denotes the weight of the connection from node j to i and o the output node. The performance is sensitive to the topology choice (H).A NN with $H = 0$ is equivalent to the MR model.By increasing H, more complex mappings can be performed, yet an excess value of H will overfit the data, leading to generalization loss. A computationally efficient method to set H is to search through the ...

In statistics, stepwise regression is a method of fitting regression models in which the choice of predictive variables is carried out by an automatic procedure. In each step, a variable is considered for addition to or subtraction from the set of explanatory variables based on some prespecified criterion. Usually, this takes the form of a sequence of F-tests or t-tests, but other techniques ...
